

How effective is E.D.R.O.?

Scientific research results with **E.D.R.O.™** indicate:

E.D.R.O. reduced overall ammonia concentration by over 40% at a study in Northern Colorado.

E.D.R.O. was highly effective in creating a healthier environment for horses and people at a study in Iowa as aerial ammonia concentration was reduced by 61%.

Is E.D.R.O. safe?

E.D.R.O. is made with all-natural ingredients and requires no special handling.

E.D.R.O. is safe and effective for all livestock and although formulated for horses, it can be used wherever offensive gases accumulate. This includes feeding to cattle, sheep, pigs, poultry, show animals, exotic animals and pets.

E.D.R.O. is a product of DPI GLOBAL of Porterville, California. DPI GLOBAL has been in the business of reducing odors in livestock for over 40 years. DPI GLOBAL is committed to producing high-quality, all-natural products that are backed by sound, scientific research.

MY HORSE'S CHOICE
Natural Equine Products

What is E.D.R.O.

E.D.R.O. is an all-natural, environmentally safe feed supplement that has been shown through extensive research to eliminate noxious gases including ammonia, sulfides and phenols.

E.D.R.O. combines high-quality ingredients that are very palatable and nutritionally sound with a proprietary ingredient blend that is scientifically proven to reduce noxious gases.

Natural Ingredients

Provide a formula base that ensures rapid consumption and nutritional quality.

Proprietary Blend

Reduces formation of ammonia and other noxious gases at the source.

Only the highest quality ingredients are used in the production of E.D.R.O. to ensure your horse the finest nutrition supplement possible.

Why use E.D.R.O.?

High concentrations of ammonia and other noxious gases can increase the risk of serious health problems for horses and farm workers such as eye irritation, respiratory disease, foal pneumonia and confinement cough.

E.D.R.O. benefits:

- Maintains optimum respiratory health
- A healthier gut supports maximum digestion and oxygen capacity
- Sustains a healthier environment for horses and farm workers.

How is E.D.R.O. fed?

E.D.R.O. is a pelleted feed ingredient that is sprinkled on top of your horse's normal grain based ration. Pellets can then be mixed in with the ration or simply left on top of the meal.

E.D.R.O. is fed at a rate of one ounce per head per day. A one ounce measuring scoop is provided in every pail for your convenience.

E.D.R.O. can be provided all in one feeding or divided between two portions if your horse is fed twice per day. For maximum reduction of noxious gases, it is essential that your horse receives at least one full ounce of **E.D.R.O.** per day.

How does E.D.R.O. compare to other products?

E.D.R.O. is more effective than other ingredients that are added to the feed to control noxious gases. Additionally, on a per head basis, **E.D.R.O.** costs just pennies a day.

PROOF OF PERFORMANCE with E.D.R.O.™

“At the start of the trial with **E.D.R.O.**, I would have rated the ammonia level at 10. By the end of the trial, it had reduced to about a 3.”

Lance Shockley
Loveland, CO

“I firmly believe in **E.D.R.O.** and am now going to be using it in all my facilities the entire year.”

Terry Stever
Hudson, CO

“Three of my seven horses had trouble with coughing; however, since feeding **E.D.R.O.**, I haven't heard a cough or wheeze from any of the group.”

Jane Hammer
Kathryn, ND

“I have been using your product, E.D.R.O., for a few weeks now and I cannot believe the difference in my barn. You can't even tell that I have horses in there anymore.”

Crystal Summers
Fort Dodge, IA
